

Company Overview

Telson Resources Inc. is a Canadian based junior resource company focused on the exploration and development of its advanced stage Tahuehueto gold-silver project in northwestern Durango State, Mexico.

The 9,081 hectare property covers at least 12 mineralized zones hosted within a structurally controlled epithermal system that has been traced for more than 6 km. The company's ongoing exploration programs are focused on expanding the most recent NI 43-101 resource estimate from June 2009. Another important goal is to explore and confirm the potential and extent of other known zones.

Telson Resources controls Tahuehueto through a 99% owned Mexican subsidiary. The project lies within the Sierra Madre Mineral Belt, which hosts most of Mexico's producing mines and active exploration and development projects.

In addition to Tahuehueto, the company has completed a 1st phase exploration program at its Jocuixtita Silver project in Sinaloa State, Mexico which produced very promising results. Additional exploration is planned as funding permits.

Telson also recently announced the signing of a binding letter of intent with Minera Hestgold S.A. de C.V. whereby Telson's wholly owned subsidiary will acquire an initial 51% interest of the El Realito Gold Project in Sinaloa, Mexico. The Realito Project is a very near term gold and silver production opportunity. Telson has the right to contribute additional funding in order to explore and develop the project, and increase its cumulative ownership position to 70%.

TELSON RESOURCES INC.

Corporate Summary

Industry:	Mineral Exploration
TSX.V Symbol	TSN
OTCBB Symbol:	SOHFF
Shares Outstanding:	32,236,616
Stock Options:	1,515,625
Warrants:	4,878,125
Shares Fully Diluted:	38,630,366
Recent Share Price:	$0.05

Tahuehueto Project - Durango, Mexico

The Tahuehueto Project consists of 29 mining concessions grouped into six non-contiguous blocks that total approximately 9,081 hectares. On October 4, 2010, Telson announced the results of a Preliminary Economic Assessment ("PEA"). Key findings from this report included a potential mine life of greater than 10 years, potential mill feed over the life of mine at 9.0 million tonnes at average grades of 1.64 g/t Au, 28 g/t Ag, 0.18% Cu, 0.87% Pb and 1.64% Zn. Mr. Ralph Shearing, President/CEO of the Company states "The delivery of these robust PEA assessment numbers is one of the most significant milestones in the history of the Company and clearly demonstrates the potential economic viability of the Tahuehueto Project. It is important to note that this economic assessment was calculated from the resource as outlined in the most recent 2009 NI 43-101 compliant mineral resource. Very significant upside exploration potential exists with the unexplored portions of the current resource structures."

Summary of Preliminary Economic Assessment

Net Cashflow	$US 184.2 million
Net Present Value (5% discount)	$US 109.6 million
Internal Rate of Return (IRR)	31%
Payback Period	27 months
Mine Life	11 years
Maximum Processing Rate	1,000,000 tonnes/annum

Calculations based on 3 yr rolling average of metal prices at the end of August 2010.
Currency US$ - Gold $965.81, Silver $15.38, Copper $2.92, Lead $0.95, Zinc $0.88

Jocuixtita Project - Sinaloa, Mexico

The Jocuixtita Project is located near the town of San Ignacio and approximately 120 km northeast of Mazatlan. Access to the property is via highway between Mazatlan and Culiacan except for the last 67 km which is over gravel road. The property consists of eleven contiguous mining concessions covering a cumulative area of 4,103 hectares. The property hosts a number of northwest and cross cutting northeast trending epithermal vein structures mineralized with silver, gold, lead, copper and zinc.

The Jocuixtita property has not been explored using modern exploration methods. The principal structure hosting the El Carmen—La Salvadora—El Eden historic mine workings has been traced over a minimum of 3 km of strike length. During a due diligence site visit, the Company observed exposed mineralized zones within this principle structure ranging from four to ten metres in width.

El Realito Project - Sinaloa, Mexico

On April 12, 2013, Telson announced the signing of binding letter of intent whereby Telson's wholly owned Mexican subsidiary will acquire an initial 51% interest, with the potential to increase this interest to 70% based on contributing additional funding to explore and develop the project. The project is a low sulfidation epithermal gold-silver deposit that consists of several mineralized structures. The main structure has been traced over 4 km. of strike length and extensively exposed along approximately 1.5 km of that strike length. The Realito project has mining and processing facility on site, capable of processing up to 300 tonnes per day by ball mill processing and gravity precious metal separation. The crushing circuit has an over capacity of up to 800 tonnes per day in anticipation of transitioning to heap leach operations in the future. The facility is not yet operational requiring approximately $1.3 million in funding and approximately 6 months to complete.
